## A New Hope for Stroke Patients

For more information,  
Please visit:  
[www.neuroaid.com](http://www.neuroaid.com)

Greetings!

Welcome to the fourth issue of the NeuroAid™ newsletter.

You will find useful updates and stories about NeuroAid™, our ongoing clinical trials, and the launching of NEUROAID10 in the USA market.

You will find as well our new section "Highlight of the month". Every month we will shed the light on a different subject related to stroke. The topic selected this month is "The Stroke Rehabilitation process".

We hope you will enjoy our newsletter and we take this opportunity to wish you a very happy holiday season.

The NeuroAid™ team

### 1. NEUROAID REACHING MORE PATIENTS ACROSS THE GLOBE

*NeuroAid™ is globally available through the Internet and we pursue the processes of country registration in Asia, the Middle-East and Europe.*

There are some testimonials recently added to our websites. Mario Peraic has shared with us his mother's motor and speech progresses. Mr Kong has communicated to us his wife's recovery of her body balance and strength, Robert Franz has reported impressive motor recovery, Carl Livermon good cognitive and memory improvement - you may read their [testimonies](#) on our website. Do not hesitate to share with us your Neuroaid experience by submitting testimonials on our site.

When you start a NeuroAid™ program, please remember to also commit to daily exercises. The combination of NeuroAid™ and stimulation will ensure you gain the most out of it.

## 2. HIGHLIGHT OF THE MONTH: THE STROKE REHABILITATION PROCESS

*Rehabilitation is a process commonly used to strengthen or to regain neurological functions. Rehabilitation is a program that helps a person who is recovering from illness or injury to regain as much function as possible.*

### What happens during rehabilitation?

During rehabilitation we learn how to regain strength or independence in daily activities

One of the key drivers of the success of any rehabilitation program is carefully directed, well-focused, repetitive practice - the same kind of practice used by all people when they learn a new skill, such as playing the piano.

One of the key neurological process supporting rehabilitation is the capacity of our brain to reorganize our healthy neurons to orchestrate new information circuit. When this happens in the brain this process is called neuroplasticity.

NeuroAid™ exact mechanism of action is unknown but its efficacy even several months/years after stroke, supports the scientific hypothesis of its role in supporting neuroplasticity.

## 3. UPDATE ON CLINICAL TRIALS

In addition to the existing clinical data showing efficiency several months post-stroke, on overall independence and neurological functions recovery, there was many requests from the international medical community to implement systematic trials on NeuroAid™ in compliance with latest clinical trials methodology for stroke.

CHIMES trial has started in November in Republic of Singapore and in Philippines and 25 stroke survivors were recruited as of 15 of December 2007. These patients were recruited within 48 hours of their stroke onset.

CHIMES will recruit 1100 patients all over Asia. The aim is to evaluate the exact impact of NeuroAid™ when started at early stage and to convince the health insurers to pick up the cost so it can be systematically offered in the stroke units

This trial is conducted by the CHIMES society a nonprofit society. It is implemented in several hospital in Asia.

If you would like to support CHIMES research by making a donation, or learn more

about CHIMES - please visit [www.chimes-society.org](http://www.chimes-society.org)

Trials are conducted in Asia please contact [medical@neuroaid.com](mailto:medical@neuroaid.com) for further information.

#### 4. THE LAUNCHING OF NEUROAID10 IN THE USA

After the success of NeuroAid™, we are launching a new version of NeuroAid™ for the USA market.

NeuroAid10™ is a daily dietary supplement that supports your neurological functions.

NeuroAid10™ is derived from NeuroAid™ and contains the same major ingredient as Neuroaid™ to the exception of secondary natural abstracts from animal origin. These components have been removed to comply with FDA guidelines on dietary supplement for the United States Market and to support local availability in the USA.

NeuroAid10™ is recommended for achieving stronger and healthier motor and cognitive neurological functions. It is particularly recommended during physiotherapy or other rehabilitation program.

Starting December 26th, USA residents will be able to order NeuroAid10™ online.

For more information, please visit our new website [www.neuroaid10.com](http://www.neuroaid10.com)

Sincerely,

**Innovative medicines** for patients and physicians  
Focus on **safety, quality and clinical development**
